APPLICATION FOR PERMIT UNDER POLLUTION CONTROL ACT, 1967 (Effluent)

THIS APPLICATION is to be filed with the Director, Pollution Control Branch, Parliament Buildings, Victoria, B.C. Any person who qualifies as an objector under section 13 (2) of the *Pollution Control Act, 1967* may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or, where service is required, within 30 days of the serving of a copy of the application, file with the Director an objection in writing to the granting of a permit, stating the manner in which he is affected. Those who do not so qualify may file with the Pollution Control Board an objection in writing under section 13 (6), in the same manner and time period as described above.

The Capital Regional District, of 209 Burnes House, Bastion Square, Victoria, B.C. (P.O. Drawer 1000), hereby applies to the Director for a permit to discharge effluent from a community sanitary sewerage system located in Victoria and Oak Bay into Juan de Fuca Strait, and gives notice of its application to all persons affected.

The land upon which the works are located is at Clover Point, within Section 1, Victoria Land District.

The discharge shall be located at a point south of Clover Point, up to 6,400 feet offshore.

The quantity of effluent to be discharged is as follows: Average annual daily discharge, 9,350,000 imperial gallons; maximum daily discharge, 13,865,000 imperial gallons (anticipated flows to 1976).

The operating period during which the effluent will be discharged is continuous.

The characteristics of the effluent discharged shall be equivalent to or better than the following: Total suspended solids, 244 mg./l.; total solids, 433 mg./l.; BOD, 212 mg./l.; pH range, 7.3-7.4; temperature range, 67-72°F; total coliform bacteria $(23-33) \times 10^6$ mpn. per 100 ml.

The type of treatment to be applied to the effluent before discharge is comminution, skimming, and dilution to achieve the Pollution Control Board standard at the shoreline of a median mpn. of 1,000 coliforms per 100 ml. during the period May to September.

I, W. G. Gerry, P.Eng., Director of Engineering, hereby certify that a copy of this application has been received by the Capital Regional District.

This application, dated on the 11th day of October 1972, was posted on the ground in accordance with the Pollution Control Regulations.

W. G. GERRY

Explanatory Notes

1. The construction of disposal facilities at Clover Point is necessary to adequately dispose of the wastewater flows of the northeast and Clover Point trunk sewers. These works represent a further step toward the implementation of the master plan for the provision of sewage-disposal facilities in the Capital Regional District which could ultimately result in conveying wastewater flows from these locations to advanced-treatment facilities at Macaulay Point.

2. The flows at Clover Point will be subjected to preliminary treatment in the form of trash screening (referred to as "skimming" in the above application) and comminution, prior to pumping through a deep ocean outfall (up to 6,400 feet long, the exact length to be determined by oceanographic studies and design consideration) into well-mixed waters where treatment will be provided through a combination of dilution and bacteria die-away. Although flows anticipated to 1976 are shown on the application, facilities will be planned, designed, and constructed to accommodate requirements to the year 2015 and, at the appropriate time, the application will be amended. Construction of these facilities is required to eliminate potential public health hazards on the beach and in marine recreational areas, to restore aesthetic conditions at the present point of disposal, and to maintain the quality of the marine environment.

3. The response of a water system to the discharge of wastes is dependent in a complex fashion upon a large number of factors and is ultimately manifested by a deterioration of the quality of the marine environment. This phase of construction forms part of a long-term programme having the objective of the maintenance of adequate levels of environmental quality in the receiving waters. If necessary, this aim will be accomplished by extension of the present monitoring programme in order to ensure that constructed systems are operated to maintain water quality within established standards and to establish the timing of system modifications and (or) additions.
